Based on period from:	01/07/2020	01/07/2020
Total Expense	0.46%	0.29%
Transaction Costs	0.00%	0.00%
Total Investment Charge	0.46%	0.29%
1 Year Total Expense	0.46%	0.29%

Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Commentary

Fund review

The review of the FTSE/JSE All Bond Index in Q4 2023 saw the deletion of TN25 and TN40, and the addition of R2053 and TN30 to the index. The fund was positioned for these changes and performed in line with the Index. The R186 Government bond remained the largest bond in the fund and its yield decreased from 9.42% to 8.67% and its modified duration decreased from 2.63 to 2.53 over the quarter. The fund's yield decreased from 11.67% to 10.83% and its modified duration increased from 5.6 to 5.7 over the quarter.

Market overview

Globally, the US kept their interest rates unchanged in the December FOMC meeting for the third consecutive time, with the main driver being a cooling economy and the moderating inflation rate, albeit it remains elevated. Consequently, the prospects of a "soft-landing" have become more attainable. Particularly, the Fed signalled that it anticipates three rate cuts over the course of 2024, with economists' expectations pointing to an interest rate cutting cycle that will commence as early as May 2024. The final quarter of 2023 witnessed significant gains in global equity markets. The MSCI World Index surged by 11.1%, complemented by the MSCI EMEA's 8.0% rise. Meanwhile, the S&P 500 concluded the year at a solid 24.2%. Stability characterised the bond markets, with the 10-year US Treasury yield ending the year at 3.9%.

Within South Africa, Q4 emerged as the strongest quarter, boasting substantial gains in local indices, particularly we saw the S&P South Africa Composite Capped Index up 2.50% in December and gains of 8.49% for 2023. This impressive uptick was primarily fuelled by a more favourable December and an improved global risk sentiment. Annual figures reflected positive trends as well, with the Top 40 Index gaining 9.0%, the All-Share Index 9.3%, and the Capped SWIX 7.9%. Additionally, the All-Bond Index recorded a return of 9.7%, while the STeFI registered a gain of 8.0%. Over November 2023, the annual inflation rate came slightly below analysts' expectations of 5.6% and moderated to 5.5% from a five-month high of 5.9% in October. Though this remains elevated, it lies within the SARB's target range of 3% to 6% and served as a signal of the early effectiveness of the restrictive monetary policy stance.

Global economic indicators witnessed a shift in sentiment, especially with the Federal Reserve's adjustment from a hawkish to a more neutral stance, setting a positive tone for the commencement of 2024. Despite this, China's growth remained restrained due to weakened export demand and a downturn in the property sector.

Looking ahead

As the new year unfolds, market expectations revolve around the potential shift in the Federal Reserve's approach towards a more dovish stance. Focus remains on productivity gains and projected improvements in corporate earnings. The market anticipates a possible revaluation of large US companies, driven by increased earnings expectations and momentum, despite an overall forecast of slower economic growth. Moreover, ongoing monitoring of bond yields and expectations for China's growth trajectory are among the pivotal factors shaping future trends. Forecasts for 2024 suggest a cautious outlook for Federal Reserve rate adjustments, leaning towards potential rate cuts based on observed economic trends and inflationary pressures.

Similarly, South Africa's monetary policy hints at potential rate cuts to stimulate the economy, supported by declining inflation figures and a gradual improvement in economic prospects. However, uncertainties linger concerning fiscal challenges and the impact of oil price fluctuations on inflationary patterns. Internally, South Africa's economic performance in 2024 is poised to be influenced by export trends, consumer spending, and investments. Positive signals from declining inflation rates within the SA Reserve Bank's target range offer a favourable backdrop. Renewable energy advancements, particularly in solar imports, are expected to alleviate the persistent issue of load shedding, potentially bolstering business activity.
