Transaction Costs	0.09%	0.09%
Total Investment Charge	0.60%	0.43%

Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Commentary

Fund review

The fund's return was in line with its strategic benchmark over the quarter. All allocations contributed as expected towards the overall performance of the fund. The highest contributors to performance were derived from MSCI World (11.54%) and FTSE G7 Government Bond (5.99%).

Market overview

Global markets continued to rally despite rising fears of a second wave of the COVID-19 pandemic. While the number of infection cases continued to rise, many of the restrictions on businesses and travel were eased, which provided much needed support and confidence to markets. In Q3 2020, MSCI EMEA was up +0.9% but behind MSCI World (+7.5%) and behind MSCI EM (+8.7%). The South African Reserve Bank cut the repo rate by 25bp to 3.5% on 23 July 2020 as further stimulation of the economy but has now paused cuts at 3.5% on 17 September 2020 with the view that the move to level 1 restrictions would provide a boost to the local economy. The Monetary Policy Committee now expects that the domestic economy will shrink by 8.2% in 2020, compared to July's estimate of a 7.3% contraction, before rebounding by 3.9% (previously 3.7%) in 2021 and 2.6% in 2022 (previously 2.8%). Estimates also point to 3.3% inflation in 2020 (vs prior 3.4%), 4% in 2021 (vs prior 4.3%) and 4.4% in 2022 (vs prior 4.3%). Policymakers said that both the risks to the growth outlook and the inflation outlook are assessed to be balanced, adding that monetary policy alone is insufficient to improve the potential growth rate of the economy or reduce fiscal risks. Local indices were up over the quarter with Top 40 (+0.68%), All Share (+0.72%), the Capped SWIX (+1.03%), ALBI (+1.45%), and the STEFI (+1.16%).

Looking ahead

Despite risks of a second wave of COVID-19 infections in European countries, continued trade concerns between the China and the U.S., the protracted BREXIT overhang, and nervousness around the U.S. election presenting us with near term uncertainties; there are still positive sentiments regarding COVID-19 vaccine developments, dovish central bank policy stances and ongoing economic recoveries due to softer restriction levels. Locally, there seems to be deliberate efforts to rejuvenate faith in the ruling party through initiatives directed at rooting out corruption across all pillars of government, which will bode well for sentiment towards investments in the South Africa. However, while political and fiscal reform play out, social and economic reform remain precarious as the effects of COVID-19 pandemic seem to be something we will be recovering from for longer than initially thought. Despite these shaky fundamentals, it seems the JSE is poised to remain range-bound for the rest of 2020, commodities to continue enjoying their rally but at a more subdued trajectory, and for the Rand to remain lacklustre at levels around R16.70. The big caveat to this is, of course, the outcome of the U.S. elections in November 2020 and especially the initial sentiments and outlooks this will pose for risky emerging market as an investment destination while the U.S. adjusts to their political reality for the next 4 years.
